

Creating a Boundary

You can create a field boundary using any field operation and equipment configuration.

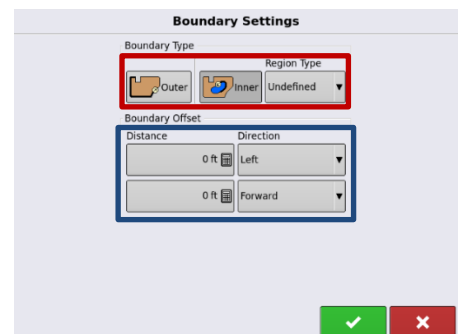

1. After starting a field, press the **Boundary Tab** and then press **Boundary**

2. To add a new boundary hit the **Green Plus**
 - a. Can also delete layers by selecting the layer and hitting the **Red Minus**

3. Select **Inner or Outer Boundary** type and select your Region Type (optional)
4. Enter **Boundary Offsets** from antenna location

5. Press **Start/Pause** to begin. To end, press **Stop/Save**
 - a. To make a perfectly straight line, press **Pause**, then drive whatever distance you want. Press **Start** to resume. The system will auto draw a straight line in between those 2 points.
 - b. To make a 90° corner, drive into it as far as possible and press **Pause**. Press **Start** to resume after making the turn and get lined back up
